Introduction to Gpg4win

Gpg4win (GNU Privacy Guard for Windows) is encryption software for files and emails.

Gpg4win enables users to securely transport emails and files with the help of encryption and digital signatures. Encryption protects the contents against an unwanted party reading it. Digital signatures make sure that it was not modified and comes from a specific sender.

Gpg4win supports both relevant cryptography standards, **OpenPGP** and **S/MIME (X.509)**. Gpg4win is the official GnuPG distribution for Windows and is maintained by the developers of GnuPG. Gpg4win and the software included with Gpg4win are free software (Open Source; among other things free of charge for all commercial and non-commercial purposes).

Preparation

Download Gpg4win from <http://Gpg4win.org/>

Download the Escrow4all Public Key from <http://www.escrow4all.com/downloads/Escrow4allPublicKey.zip>

Installation of Gpg4win

Install Gpg4win with the default settings.

Import Escrow4all's public key

1. Extract **Escrow4allPublicKey.zip**
2. Open Kleopatra from the Windows start menu

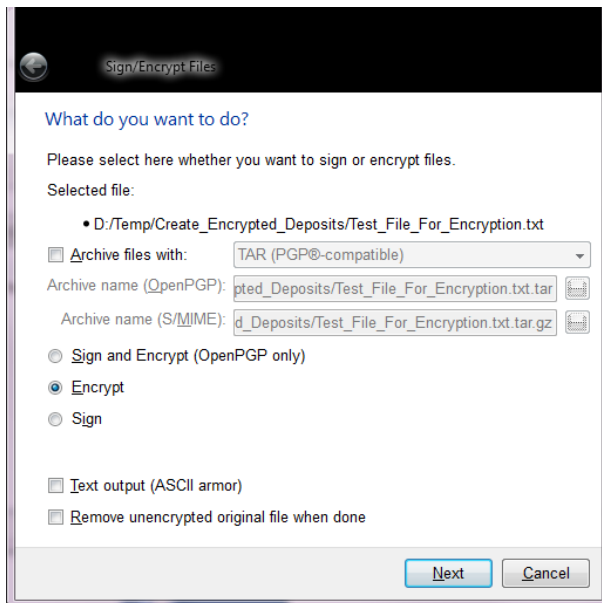

3. Click "**Import Certificates**"
4. Select Escrow4all Public Key.asc

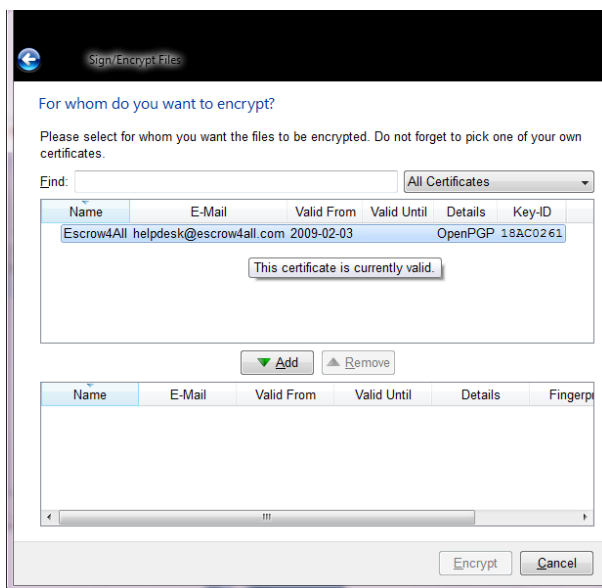

5. Click "**OK**"

Prepare escrow material

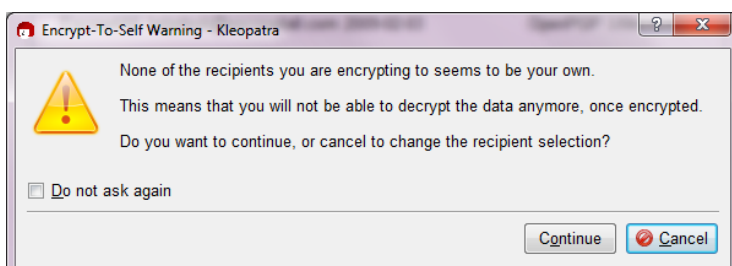

1. Create a zip/rar/7z (e.g. source-code-my-application.zip) file of all deposit material
2. In Kleopatra choose “Files” – “Sign/Encrypt files”

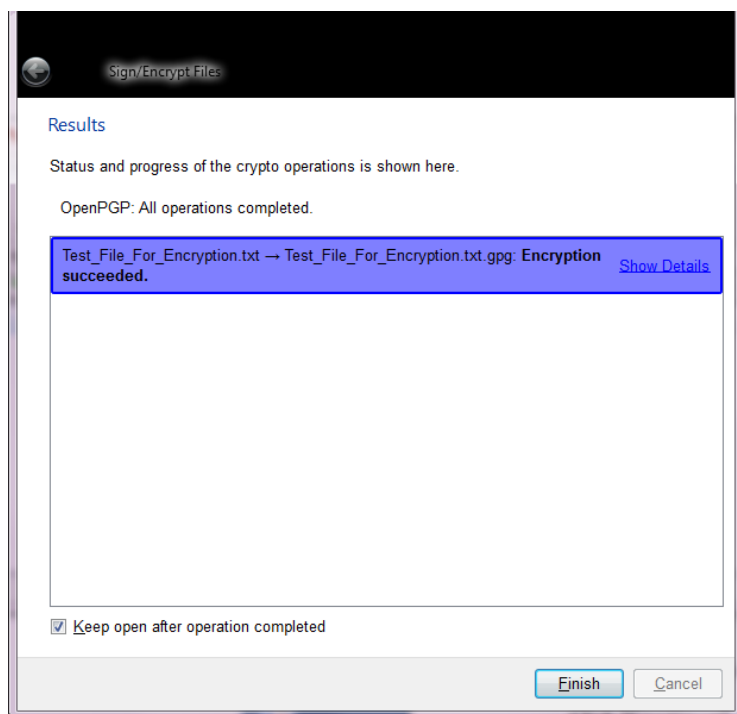

3. Click “Next”

4. Select “Escrow4all helpdesk@escrow4all.com.....” certificate
5. Click “Add” and “Encrypt”

6. Click "*Continue*"

7. Click "*Finish*"
