solutions for all.

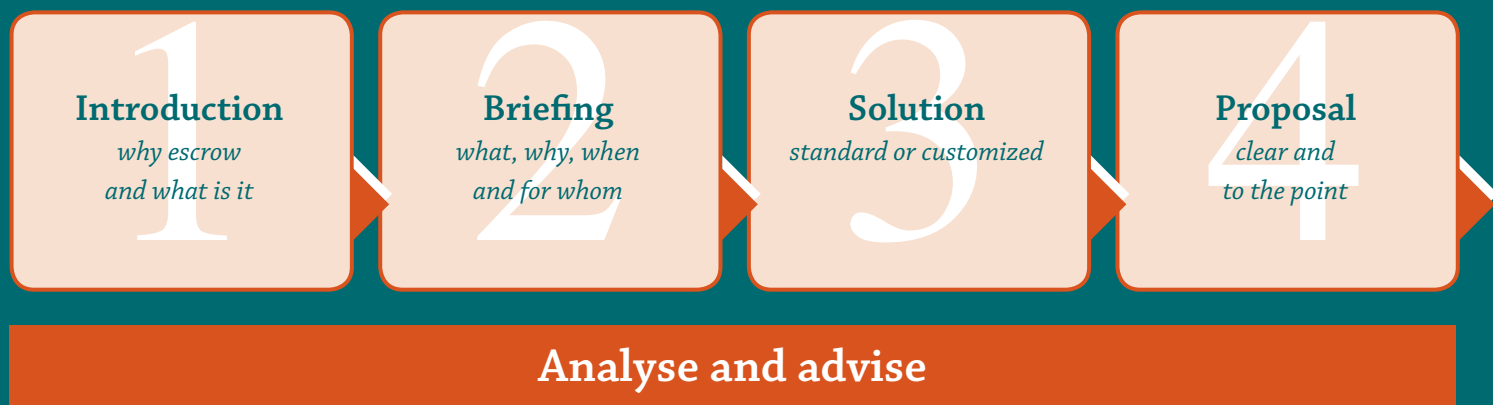

ESCROW4ALL

The best and most innovative *escrow* solutions for all.

As the most inventive technology escrow provider with extensive experience, Escrow4all has all expertise in-house to execute active technology escrow arrangements. On one hand the intellectual property of supplier is in safe hands. On the other hand the interests of user are adequately protected. As escrow expert Escrow4all provides added value to its customers through quality solutions and smart processes.

What can we do for you?

Your business case as starting point

Software Escrow

Safeguard source code and technical documentation of business critical software with an independent third party.

SaaS Escrow

Continuity arrangement for hosted applications with a focus on uninterrupted use of the application and access to user data.

Knowledge Escrow

Safeguard other forms of intellectual property and trade secrets – such as formulae and designs – with an independent third party.

Components of every escrow arrangement

Legal

Every escrow arrangement starts with an escrow contract. This contract forms the basis of every escrow relationship and through it every party understands what will happen if something unexpected occurs. Important issues – like release conditions and user requirements – but also details are clearly expressed in our escrow contracts.

Technical

An escrow arrangement fully depends on the quality of the escrow deposit. Readability, completeness, functionality are only a few of the vital elements to be considered. Escrow4all offers three quality verification solutions with the best value for money. With our advanced solutions you are ensured of superior deposits.

Administrative

Escrow4all initiates all activities required to keep your escrow arrangement up-to-date. This means that we actively request and verify new deposits. We make certain that all agreements are met and keep parties informed at all times on the status. In conclusion: we keep your escrow arrangement valuable.

Implementation

VerifOne - Check

Basic check which is carried out for each escrow deposit. We actively check if source code of the escrowed application is available.

VerifTwo - Compile & Collect

A universally applicable verification where we analyse the existing development environment and compile/test the application.

VerifThree - Complete

In this verification we recreate the development environment and compile, install and test the application fully. All directed by a project plan agreed upon by all parties.
